Characterization Box-whisker

Test HTML 4 font size:

size 8 size 7 size 6 size 5 size 4 size 3 size 2 size 1 size 0 size -1

Bad news: HTML4 font accepts a number between 0 and 7, but not with units.

Test: Result: a table with font size 0 should accept 14 columns when printed in portrait with htmldoc without any cutoff

Test: a table with font size 1 should accept 9 columns when printed in portrait with htmldoc without any cutoff

Percent viewport is CSS3 only, ie not compatible with htmldoc.

Test font size in cm:

- 0.3cm is too much
- 0.2cm is ok
- 0.12cm a little bit too big
- 0.11cm too small
- 0.1cm too small

A4 is 210×297 : let s consider we have 20cm for total text width:

Best font size should be = 20 cm/(31 cols *6 charspercol) = ?

I have read that: One inch is 2.54 centimeters. Therefore, in CSS, one centimeter is 37.79 pixels.

Test CSS style font-size in cm

Bad news: htmldoc fully ignore CSS style
